

STAINLESS FINISH OPTIONS - SELECT STAINLESS FOR THE MOST DURABLE AND ATTRACTIVE CABINET

#4 Standard Finish

#7 Polished Finish

#8 Near Mirror Finish
Note Reflected Image of Objects

- #4 Finish:** Type 304 Stainless—standard on our products. Characterized by short, parallel polishing lines. This is the most common finish. Also described as a number 4 polish.
- #6 Finish:** 304 Stainless—available at additional cost. Although this dull silver white finish still appears in specifications from time to time, it is primarily used for custom-polished items. We recommend a #4 finish as a substitute.
- #7 Polished Finish:** 304 Stainless—available at additional cost. This finish has a high degree of reflectivity, with fine lines visible from several feet away.
- #8 Near Mirror Finish:** 304 Stainless—available at additional cost. This finish is the most reflective finish and is also described as non-directional, with few visible fine lines. This finish is challenging to use because it shows finger marks and reflects the surrounding room.
